

Entrega Final

- La arquitectura está diseñada como un ecosistema de automatización para la gestión de tickets de soporte técnico.

El proceso comienza en Airtable, que funciona como base de control de datos y almacena la información de cada ticket. n8n actúa como orquestador, detectando nuevos registros y coordinando el procesamiento.

Una vez recibido el ticket, un modelo LLM procesa el lenguaje natural y realiza una clasificación semántica, determinando categoría, prioridad, resumen y acción sugerida. La prioridad permite establecer el nivel de atención requerido e impacto del incidente. Antes de continuar, el sistema realiza validaciones sobre los datos de entrada. Si existen datos incompletos o inválidos, el flujo deriva hacia una rama de error y registra la incidencia, manteniendo la trazabilidad mediante el Ticket ID. Cuando el análisis es correcto, el sistema utiliza un esquema Human in the Loop. La información se envía a Slack, que funciona como canal interno y compartido para el equipo de soporte. Allí una persona revisa el análisis generado por la IA y decide si el ticket puede avanzar.

Esta separación permite diferenciar la comunicación interna de la externa. Slack está orientado a la toma de decisiones operativas, mientras que Gmail se utiliza como canal externo para comunicarse con el cliente. La respuesta enviada al cliente utiliza un nivel de formalidad mayor y una estructura orientada a brindar información clara sobre el problema y los próximos pasos.

Una vez aprobada la gestión, la IA genera la respuesta final y el sistema la envía mediante Gmail. Finalmente, Airtable actualiza el estado del ticket a Respondido, permitiendo conocer el punto exacto en el que terminó el proceso.

La arquitectura también incorpora trazabilidad y observabilidad mediante la persistencia de estados y el registro de errores. De esta manera, es posible identificar qué ocurrió con cada ticket, en qué etapa se encuentra y, ante una falla, en qué componente se produjo. En cuanto a métricas, el sistema está preparado para analizar variables como tiempo de respuesta, cantidad de tickets procesados, distribución por prioridad, cantidad de errores y tiempos de resolución. En conjunto, la arquitectura combina automatización, procesamiento mediante IA, validaciones, control humano, comunicación multicanal y trazabilidad operacional.

- Link visualización de tabla de control de datos y Dashboard por medio de Airtable.

https://airtable.com/invite/l?inviteId=invM9qSBzI9E1dqPQ&inviteToken=4cb4beeeca0b0fa9f8f06c60339738038607577dbbcb62476b18b7476349769c&utm_medium=email&utm_source=product_team&utm_content=transactional-alerts

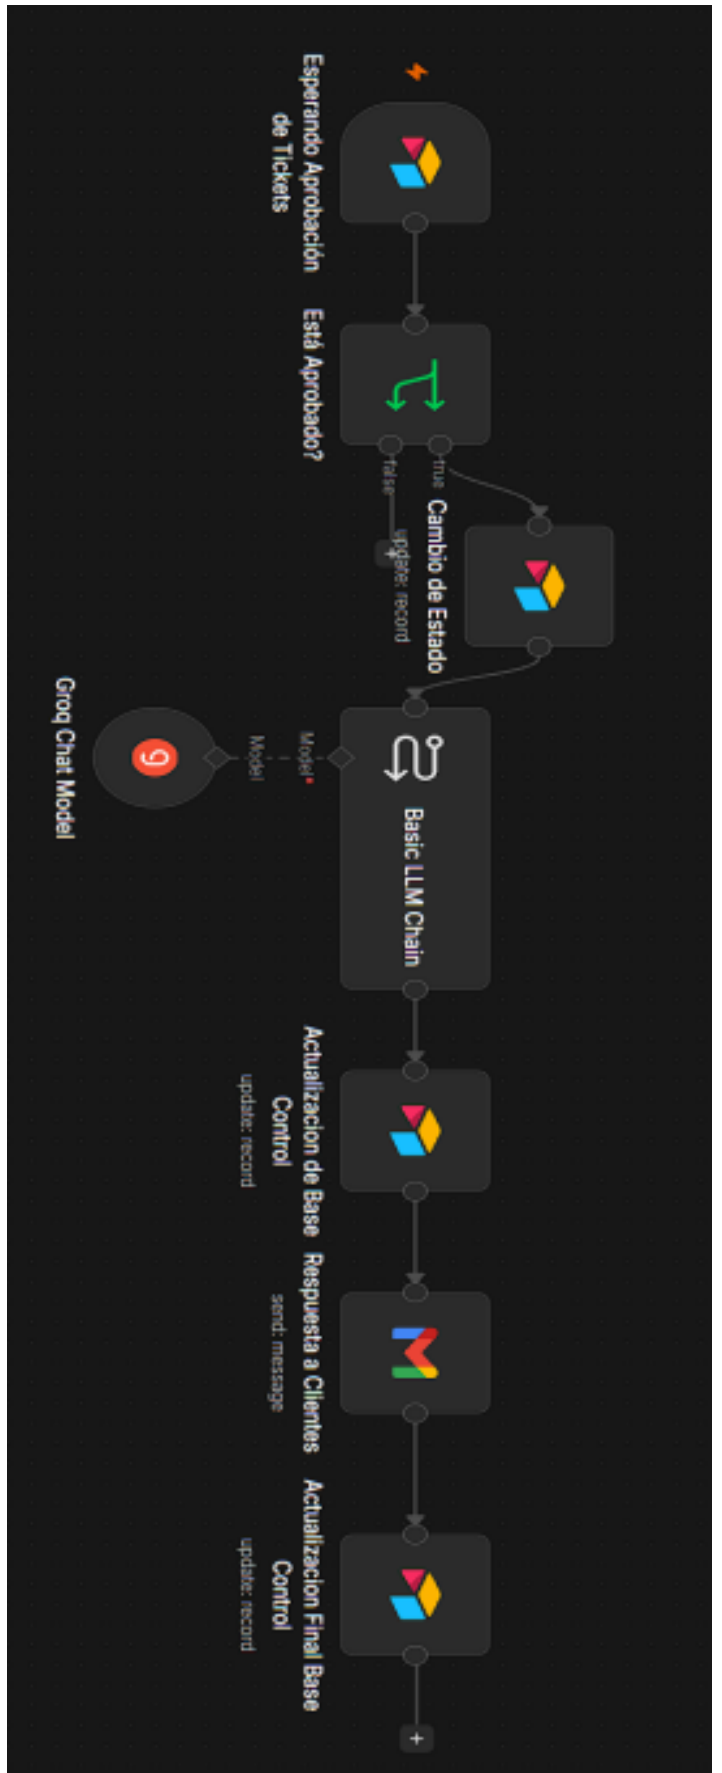

- Arquitectura

Se diagramó un sistema donde se tuvo en cuenta posibles errores donde se requiere el control humano, y donde la IA puede analizar y preparar la respuesta, pero la decisión de enviar la comunicación al cliente permanece bajo control humano.

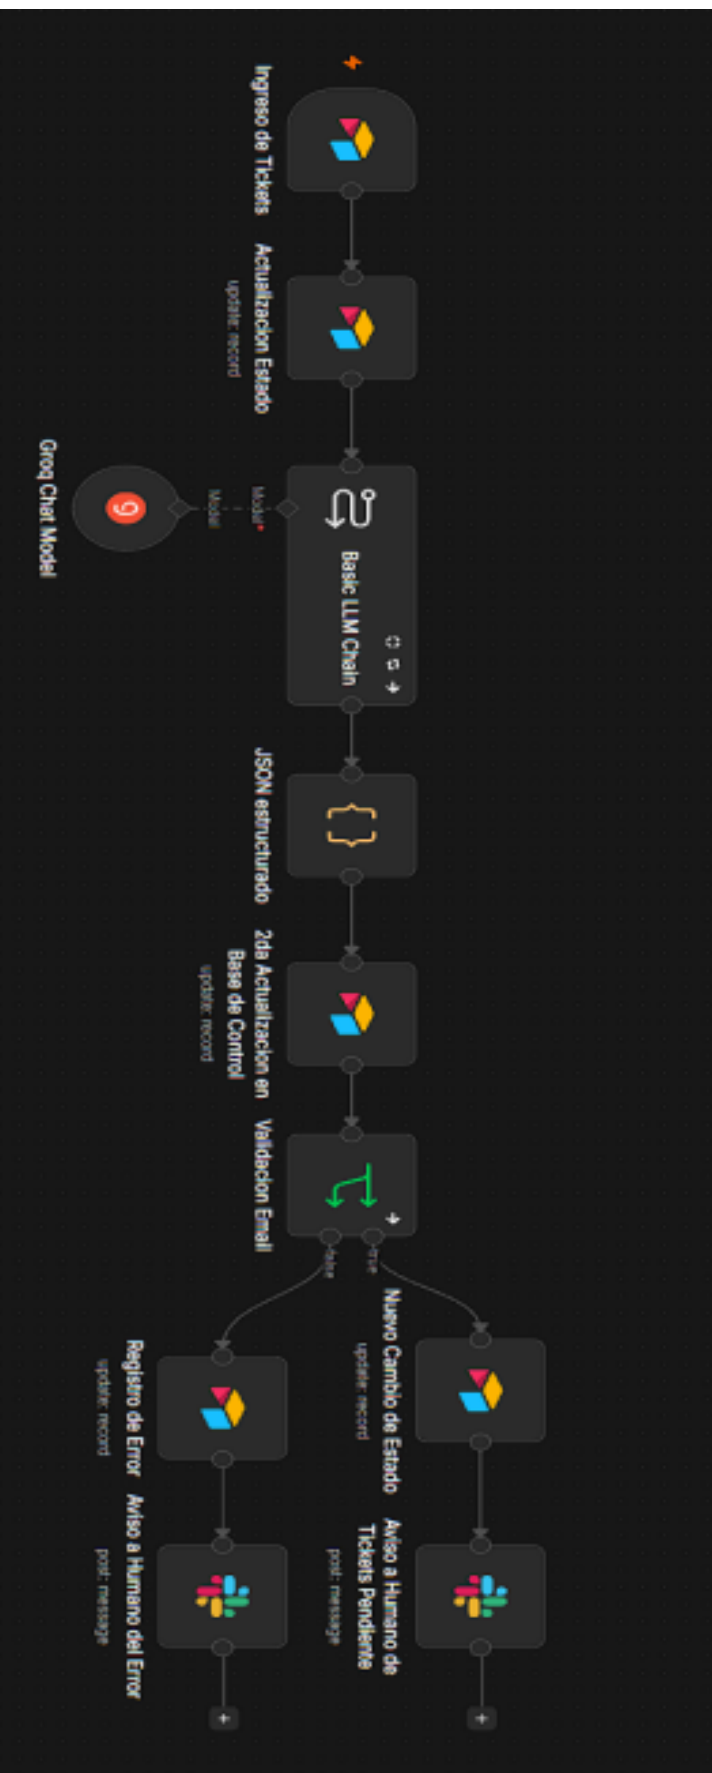

Airtable → IA Groq → Validación → HITL → Slack → Aprobación → IA → Gmail → Airtable
↘ Error → Estado Error → Slack

Orquestación + decisiones + persistencia + control humano + manejo de errores.

Flujo 2

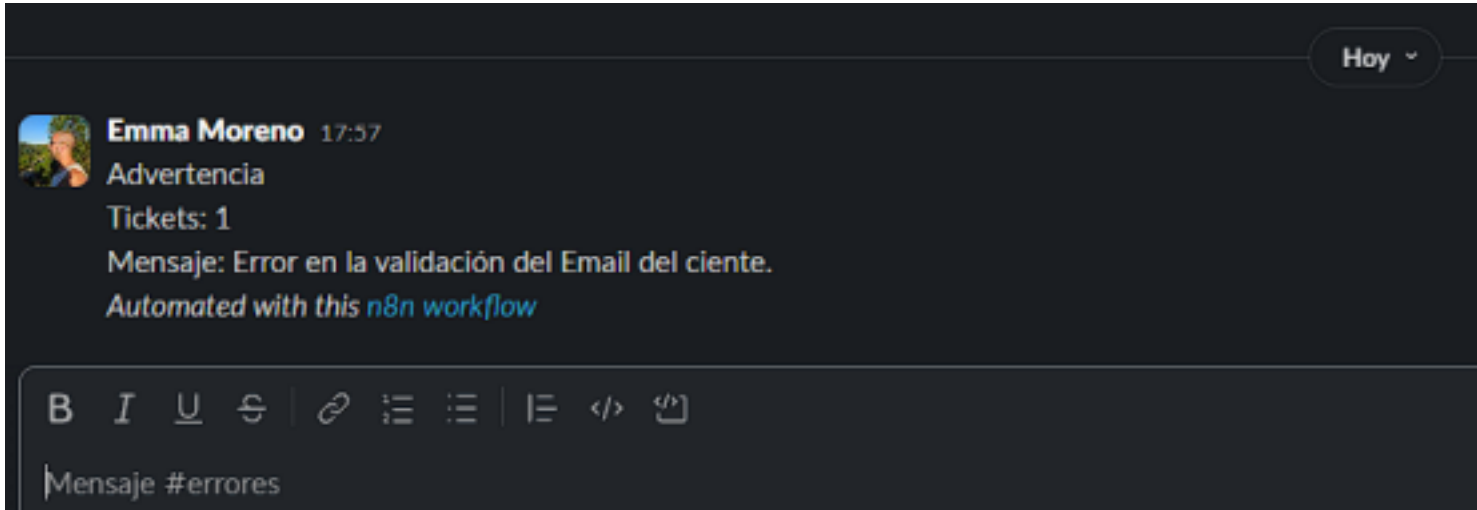

Flujo 1

Mensaje en Slack (Comunicación interna) avisando al personal humano sobre un ticket pendiente de aprobación:

Mensaje en Slack (Comunicación interna) avisando dato erróneo del cliente:

- Matriz de decisiones

La elección se basó principalmente en flexibilidad, capacidad de integración, control sobre la lógica del workflow y manejo de errores, criterios que tenían mayor peso dentro de nuestra matriz de decisión.

- Orquestador: n8n
- LLM: Groq
- Base de datos: Airtable
- Comunicación interna: Slack
- Comunicación externa: Gmail

-JSON - Flujo 1
